Selected Projects

GRAtt-VIS	■ An efficient video instance segmentation and tracking model that achieves state-of-the-art results on several benchmarks, such as YTVIS and OVIS.
InstanceFormer	■ A single-stage, tracker-free, sparse spatiotemporal transformer-based online architecture that achieves SOTA VIS performance without bells and whistles. It can process arbitrary long video sequences at a constant memory and FPS.
BoxVOS	■ A Box supervised Video Object Segmentation Framework which eliminates the need for per frame segmentation masks.
Seq-Modeling	■ Prediction of Earth's Radiation Environment using Sequential Modeling of the astronomical features.
H-Attention	■ Designing a Hierarchical Attention based Transformer network for End-to-end Object Detection.
RL-Optimizer	■ Customized Reinforcement Learning Environments to optimize the reorder point to minimize both inventory and stockout costs.
COVID-DenseNet	■ A CNN-based model to detect COVID-19 from chest radiology images which can localize the critical regions of affected images using a GRAD-CAM-based module.
Adversarial Attack	■ GAN Based Image Steganography is designed with Adversarial Attacks to fool steganographic image classifier.
BenglaAI	■ A CNN-based model for Bengali Handwritten Digit Recognition.
Big Data Analysis	■ Comparing the Performance of Garbage Collectors for Big Data Systems and Developing an interface in OpenJDK-10 enables GC customization.
UniShare	■ An academic resource-sharing platform developed using PHP, CodeIgniter framework, MySQL, JavaScript, HTML, CSS, and XAMPP server.
PoliceBox	■ An interactive server-client system developed using Java Swing, JavaFX, MySQL, and Socket Programming to manage services provided by the police efficiently.
C compiler	■ A simple C compiler using Flex and Bison.

Skills

ML tools	■ PyTorch, TensorFlow, Keras, Jupyter, Distributed training.
